Operation

Temperature Control

For cold water, position the handle
straight forward so it is parallel with
the spout (the handle will stop here
when pushing it to the right)

To increase temperature, turn the
handle to the left

The temperature will gradually
rise the further the rotation of the
handle

The handle will cease to turn once
it is at a 90° angle, supplying the
maximum temperature

Tools Required for Installation/ Maintenance

Prior to Installation

All products manufactured and supplied by Bristan are safe to use provided that they are installed, operated and receive regular maintenance in accordance with these instructions.

This product needs to be installed in accordance with, and meet the requirements of The Water Supply (Water Fittings) Regulations (Northern Ireland) 2009 and The Water Supply (Water Fittings) (Scotland) Byelaws 2014. For full Installation Requirements & Notes (IRN) please visit www.wrasapprovals.co.uk/approvals-directory

Isolation valves must be fitted to the inlet water supplies to ensure ease of future maintenance.

Before installing this product the water supply must be thoroughly flushed in order to remove any swarf, solder etc. Full access must be made available for future maintenance/servicing purposes.

This product must not be modified in any way as this will invalidate the guarantee.

Important

The images shown are for illustrative purposes only.

The tap you have purchased may look different to those pictured in this booklet but will follow the same installation steps.

Your contents page will be specific to your product.

If you find your product or any of its components differ from those shown on the contents page, please contact our customer support.

Installation

1

Look underneath the tap body to observe fixing kit rod(s) and tail inlet positions

Depending on the model, the tap will utilise 1 or 2 fixing kit rods. Refer to contents page

1 Fixing Rod

2 Fixing Rods

2

Screw in the fixing kit rod(s) into the base of the tap

Screw in the flexible tails by hand only.
DO NOT OVERTIGHTEN

Your model may come with a plinth and will either be included pre-attached or loose in the box*

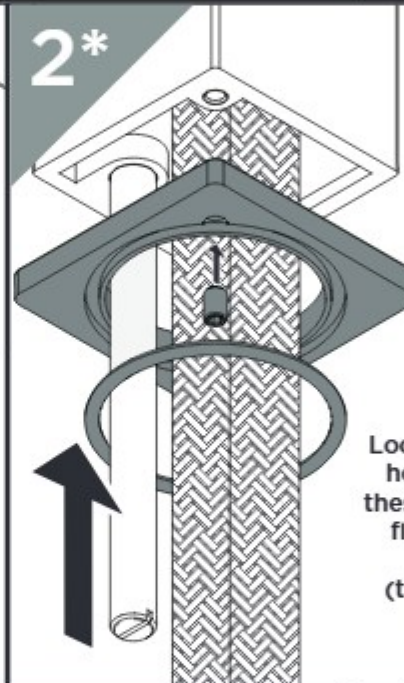

2*

If required, thread the flexible tails and fixing kit rods through the plinth and rubber seal (if loose) and align with tap body

Look for any grub screw holes on the plinth as these may be required to fix it to the tap body

(these can be located underneath the rubber seal)

3

Thread the flexible tails and fixing kit rods through the basin hole

If the hole is not large enough for both tail ends to fit through, unscrew one of the flexible tails and screw back in from underneath the basin

4

From underneath the basin, slide the fixing rod(s) through the **rubber gasket first and then the metal c plate**

Align the gasket and c plate, then begin tightening the nut up the rod towards the basin until secure

You can screw the nut by hand and tighten with a box spanner once at the top

5

Connect the hot and cold water supplies to the flexible tails and turn until tight

Hot on the left, cold on the right

REMEMBER
Refer to the next panel for correct flexible tail positions

Slight bend ✓ 90° angle ✓ Curved round ✓ Kinks ✗ Twists ✗

6

IMPORTANT
Turn on water supply for a few minutes and check all joints and connections for any leaks.

Your tap is now ready for use.

Waste Installation and Operation

1

Fit the waste above the basin ensuring the washer is in place.

2

Push waste into hole until the outer rim sits flush with the bottom of the basin

Then place the washer from underneath and tighten the backnut to secure the waste to the basin

3

Push the centre down to close the waste

Push again to open and release contents of basin

Your waste is now ready for use.

General Cleaning

Bristan products are made from premium materials, with hand polished, electroplated, PVD or EPD finishes.

Your taps or shower should be regularly cleaned with warm water, a mild pH-neutral liquid soap, and polished with a soft cloth. Any residues from soap, toothpaste, shampoos and shower gels can cause blemishes if not rinsed off straight after use.

Household bleaches and cleaners contain harsh chemicals and may damage the surface finish. Avoid using abrasive cloths, scouring pads, scrub sponges, steel wool or anything similar.

Maintenance - Cartridge/ Valve Replacement

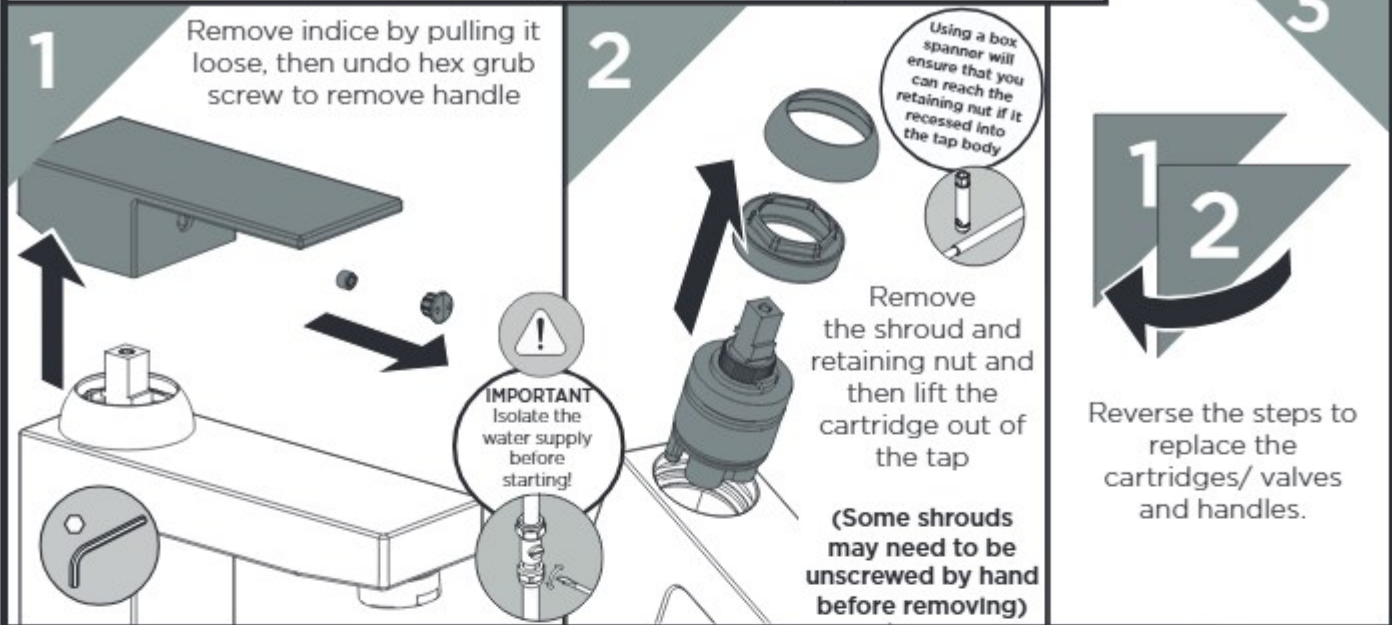

1 Remove indice by pulling it loose, then undo hex grub screw to remove handle

2 Remove the shroud and retaining nut and then lift the cartridge out of the tap
(Some shrouds may need to be unscrewed by hand before removing)

3 Reverse the steps to replace the cartridges/ valves and handles.

IMPORTANT Isolate the water supply before starting!

Using a box spanner will ensure that you can reach the retaining nut if it recessed into the tap body

Maintenance - Clean/ Replace Outlet

1a Using an adjustable spanner, unscrew gently to remove the outlet

1b If your model comes with one, insert the key tool into the outlet and twist to release it

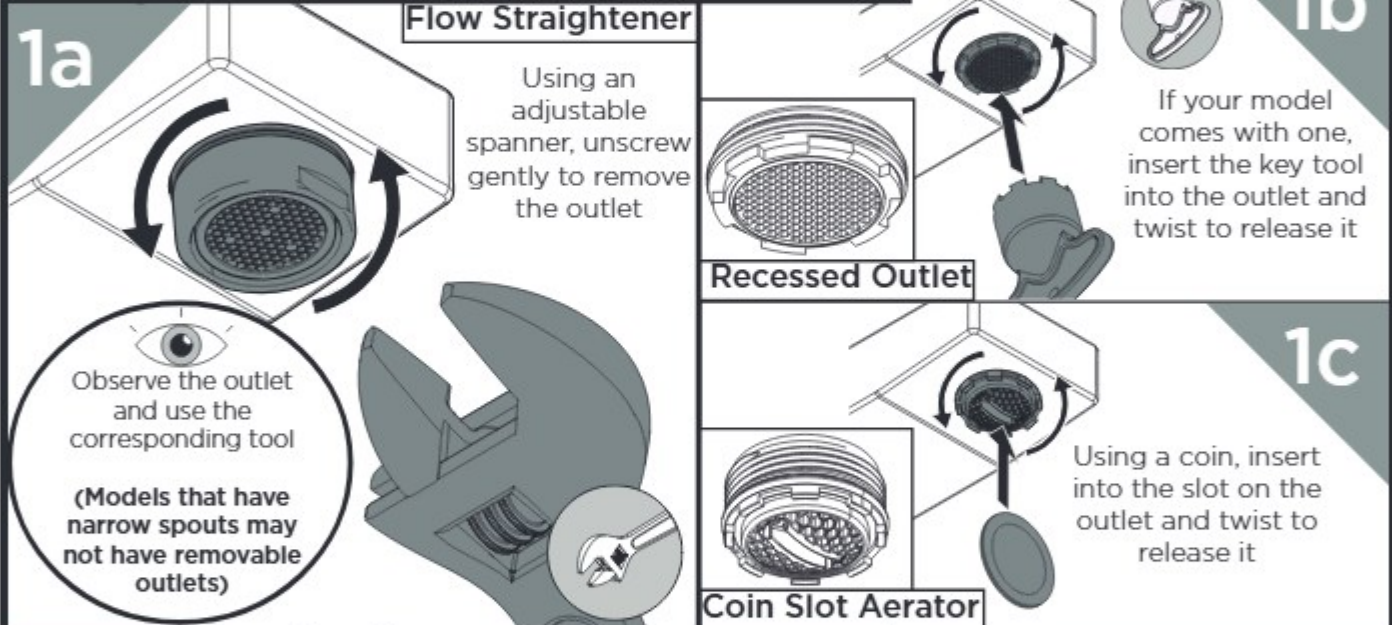

1c Using a coin, insert into the slot on the outlet and twist to release it

Observe the outlet and use the corresponding tool
(Models that have narrow spouts may not have removable outlets)

Flow Straightener

Recessed Outlet

Coin Slot Aerator

2 Check all loose parts for any damage, then soak using a suitable solution to de-scale

3 Reverse the steps to replace the outlet

Love Your Chrome

Bristan offers an effective chrome-friendly cleaning kit for use with your taps and showers. Scan the QR Code or search for 'CLEAN KIT01' on www.bristan.com.

Troubleshooting

Symptom	Cause	Remedy
Low Flow	Partially closed isolation valve.	Open isolation valve.
	Airlock or partial blockage in the supply pipework.	Flush through pipework to ensure removal of debris and any airlocks.
	Partial blockage in the outlet	Remove to Clean and soak in suitable solution.
No hot water or cycling hot and cold	Instantaneous water heater cycles on and off as flow rate or pressure is too low.	Increase water flow rate or pressure through system.
No Flow	Closed isolation valve.	Open isolation valve.
	Mains water supply turned off.	Turn on mains water supply.
Temperatures not corresponding with taps	Inlet pipes have been connected incorrectly	Swap the inlet tails around.
