

## General Care & Safety

Wall plugs supplied are ONLY suitable for solid stone/brick walls. They are not suitable for use in aerated blocks or similar. If fixing to a stud wall, sufficient extra internal reinforcements must be made to the wall. Screws must locate into suitably reinforced studs and noggins.

Take care using power tools – The use of a residual current device (RCD) is recommended. Beware of hidden cables or pipes when drilling.

This product can be dangerous if installed incorrectly. This product must be installed by a qualified plumber or installer. It is the installer's responsibility to check that the fixings are suitable for the installation in hand.

Cistern fittings are suitable for Water pressure: 0.2 - 10 bar. Do not add caustic chemical substances (e.g. containing chlorine compounds or similar) into the cistern. These can damage the valve components and cause failure.

Before starting to enclose the cistern, the system must be first tested for leaks before 2nd fix commences. Temporarily fix the back to wall pan in place and make connections. Turn the water supply on and flush the pan to check for leaks. This is particularly important to do prior to tiling for fully tiled in installations

This cistern is not suitable for use with wall hung pans without the use of a suitable supporting frame.

## Slimline Concealed Cistern - Side Entry

Please retain for future reference

Δ TR9002

This product must be installed by a qualified fitter or plumber in accordance with and meet the requirements of the Water Supply (Water Fittings) Regulations 1999 and Scottish Byelaws 2004

### Parts included

1. Cistern
2. EPS Jacket
3. Seal
4. Flush Bend Nut
5. Flush Bend
6. Key Seal
7. Side Entry Fill Valve
8. 2 x Attaching Screws
9. Attachment Plate
10. Cistern Cover
11. Pneumatic Push-button
12. Air Hoses
13. Flush Valve
14. Cistern Fixing Screw

Fitting dimensions

Installation of the cistern

Adjusting the water level

By adjusting the fill valve the water level can either be increased or decreased accordingly

Fixing the toilet

**note**  
Lubricant not supplied.  
Please use a suitable  
plumbers grease.

**important**  
Great care must be taken when  
fixing the toilet. Careful cutting  
of the pipe and alignment are  
very important to ensure no  
leaks occur.

**important**  
Please support the flush pipe when  
locating the toilet onto the rubber seal.  
Failure to do so could result in damage  
to the flush connection

Adjusting the flush volume

By adjusting the flush valve the flushing volume can be altered

**important**  
Do not tighten this nut. It has  
been factory set and tank  
water tested

**tips**

It is recommended that the flush bend be  
adequately braced against the wall using  
an appropriate pipe bracket or wooden  
packing. Ensure there is no tension /  
stress on the connection to the tank as  
this could cause the fittings to leak.

Cut the flush bend to size and attach to the  
cistern, using the appropriate fittings, as  
shown. Ensure alignment to pan from cistern  
tank is square both vertically and horizontally  
to allow seal to function correctly

**note**  
Stop valve not included

Connect the water supply to the cistern using an approved double check valve to fluid category 3 in addition to an accessible service valve.

## Installation with a front access panel

## Installation with a top access panel

## Installation of pneumatic push-button
